

Looking for Cold or Allergy Medicine?

Please ask a clerk or pharmacist for the medication.

Some cold and allergy medications contain ingredients used in the production of deadly methamphetamine—an illegal drug that is undermining our communities.

Used as directed, these common cold and allergy medications are proven safe and effective, but when purchased in large quantities and “cooked” with other ingredients they will kill. That’s why we have joined MethWatch and the Meth Free Indiana Coalition to hinder the sale of products used improperly to manufacture Meth and help educate the public about its dangers. Help us continue to stock the medicines you need by supporting the fight against Meth production in our community.

The destruction of Meth is nothing to sneeze at.
